

Inside agentic automation: architectures that show the "How".

From reference architectures for technical decision-makers that show where UiPath fits, to high-level visuals that illustrate how everything works, solution architectures across the lifecycle, and detailed views of platform interactions and deployment scenarios.

Safe Harbor

Statements we make in this presentation may include statements which are not historical facts and are considered forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995, which are usually identified by the use of words such as “anticipates,” “believes,” “estimates,” “expects,” “intends,” “may,” “plans,” “possible,” “projects,” “outlook,” “seeks,” “should,” “will,” and variations of such words or similar expressions, including the negatives of these words or similar expressions.

We intend these forward-looking statements to be covered by the safe harbor provisions for forward-looking statements contained in Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, and are making this statement for purposes of complying with those safe harbor provisions.

These forward-looking statements include, but are not limited to, statements regarding: our ability to drive and accelerate future growth and operational efficiency and grow our platform, product offerings, and market opportunity; our business strategy; plans and objectives of management for future operations; the estimated addressable market opportunity for our platform and the growth of the enterprise automation market; the success of our platform and new releases including the incorporation of AI; the success of our collaborations with third parties; our customers’ behaviors and potential automation spend; and details of UiPath’s stock repurchase program. Forward-looking statements involve known and unknown risks, uncertainties, and other factors that may cause our actual results, performance, or achievements to be materially different from any future results, performance, or achievements expressed or implied by the forward-looking statements. These risks include, but are not limited to, risks and uncertainties related to: our expectations regarding our revenue, annualized renewal run-rate (ARR), expenses, and other operating results; our ability to effectively manage our growth and achieve or sustain profitability; our ability to acquire new customers and successfully retain existing customers; the ability of the UiPath Platform™ to satisfy and adapt to customer demands and our ability to increase its adoption; our ability to grow our platform and release new functionality in a timely manner; future investments in our business, our anticipated capital expenditures, and our estimates regarding our capital requirements; the costs and success of our marketing efforts and our ability to evolve and enhance our brand; our growth strategies; the estimated addressable market opportunity for our platform and for automation in general; our reliance on key personnel and our ability to attract, integrate, and retain highly-qualified personnel and execute management transitions; our ability to obtain, maintain, and enforce our intellectual property rights and any costs associated therewith; the effect of significant events with macroeconomic impacts, including but not limited to military conflicts and other changes in geopolitical relationships and inflationary cost trends, on our business, industry, and the global economy; our reliance on third-party providers of cloud-based infrastructure; our ability to compete effectively with existing competitors and new market entrants, including new, potentially disruptive technologies; the size and growth rates of the markets in which we compete; and the price volatility of our Class A common stock.

Further information on risks that could cause actual results to differ materially from our guidance and other forward-looking statements can be found in our Annual Report on Form 10-K for the fiscal year ended January 31, 2025 filed with the United States Securities and Exchange Commission (SEC), in our Quarterly Reports on Form 10-Q filed with the SEC, and in other filings and reports that we may file from time to time with the SEC. Any forward-looking statements contained in this presentation are based on assumptions that we believe to be reasonable as of this date. Except as required by law, we assume no obligation to update these forward-looking statements.

Our fiscal year end is January 31, and our fiscal quarters end on April 30, July 31, and October 31. All third-party trademarks, including names, logos and brands, referenced by us in this presentation are property of their respective owners. All references to third-party trademarks are for identification purposes only. Such use should not be construed as an endorsement of the products or services of us.

- 01 Senior technical leaders are grappling with the challenges of shifting to a next-gen tech stack. **How does UiPath fit in?**
- 02 Agentic automation with end-to-end orchestration is the answer. But **how does it work?** How do Agents work? How does Orchestration work?
- 03 So, **how do you build, deploy, and operate agentic solutions** with UiPath?
- 04 What about **everything else** in the platform? **How do the rest of the products work?**

01

How does UiPath fit into the technical leader's tech stack?

Today's tech stack, caught between maintaining legacy systems and driving transformation

Automation and other digital technologies have helped but haven't solved the bigger challenge. And now AI crashes the party.

Agentic automation with end-to-end orchestration can bring it all together

UiPath extends and complements your existing investments

AGENTIC ORCHESTRATION

02

How does agentic automation work
with UiPath?

Agentic automation with UiPath

Agentic orchestration

Agents

Prompt, Tools, Context,
Evaluations, Escalations

Robots

UI Automation, API
Workflows, IDP

People

Action Center, Apps,
Assistant

End-to-end orchestration across agents, robots and people.

End-to-end process lifecycle
Powered by Maestro

Model & implement - Build and deploy processes in Studio Web

- Standard BPMN 2.0 constructs
- UiPath extensions
- Advanced decisioning
- Autopilot™ for Maestro

Operate - Orchestrator and Temporal Service

- Process instance management
- Operational analytics
- Pause, resume, edit variables, retry, cancel, go to step, and migrate.

Monitor and optimize - Process Intelligence

- BPMN models
- End-to-end processes
- Agents
- Automations
- HITL

Connectors / APIs - Business applications and data sources

UiPath AI Agents

03

So, how do you build, deploy, and operate agentic solutions with UiPath?

Deliver agentic automation solutions with UiPath

Solutions architecture

* More capabilities to be included later

Solutions deliver efficient implementation

Activities are packaged into the Solution Project

Delivers all required solution resources to a tenant

Logs record activity execution

Which workflow types should you use?

If your project must...	Workflow Type	When to use	Not intended for
Orchestrate agents, robots, and people in a single, end-to-end business process that might span hours or days	Maestro Process	- Orchestrate agents, robots and human expertise in one process - Business Process Management - Long-running processes that can be paused & resumed - Embedded Monitoring and Optimization - Cloud Scenarios (as of now)	- Task-level, "one-and-done" automations (<a few minutes) - Scenarios that need directly access to RPA and UI activities or code exits
Perform desktop or virtual-machine UI automation with the full UiPath activity catalogue, either on-premises or in the cloud	RPA Workflow (on Robot)	- UI automation on desktops or Virtual Machines - Full access to UiPath pro-developer automation capabilities - Broad access to Applications via UI when there are no (good) APIs - Automate through Citrix or other remote desktop technologies - Cloud-to-ground and ground-to-ground scenarios - Scripting in VB/.net environment - Full power IDE via Studio (Desktop) - Works on Windows and Mac (new)	- Robotless scenarios - Projects that need to spin up in milliseconds (robot startup takes time) - API/JSON/JS-native development
Automate browser-based UI or mixed scenarios between APIs and web UIs without using a local robot, and you are happy to stay in the cloud	RPA Workflow (Serverless)	- UI automation for browsers/websites - No local robot needed - Lightweight development option via Studio (Web) - Mixed scenarios between APIs and web UIs - Cloud scenarios	- Desktop UI automation - Cloud-to-Ground/Ground-to-Ground scenarios - Activities that involve cross-platform automation - API/JSON/JS-native development
Build a pure API integration or composite service that uses JSON and JavaScript, and scale fast	API Workflow	- API-only scenarios - Fast and scalable - No robot (license) needed - Native JSON and JavaScript support - Easy to embed HTTP requests - Expose as composite service/API (25.10) - Cloud scenarios (as of now)	- Cloud-to-Ground/Ground-to-Ground scenarios - Any need for UI automation - Scripts using anything other than JS
Model a business process that includes human-in-the-loop (HITL) tasks, escalations or SLAs, and may run on-premises	Long-running Workflow	- More workflow-oriented compared to Maestro - Model long-running workflows with BPMN in Studio - Can run on-premises/on the Robot, better access to (classic) activities - For processes that require strong boundary events, dynamic parallel processing, event subprocesses, data typing, and queue item handling - For combining different automation artefacts including HITL in automation into one workflow coming with a robot-optimized execution - More complex automation use cases	- Embedded process monitoring and analytics - Automation-centric scenarios - Projects that require support for all BPMN elements
Include agentic capabilities for decision making, classification, natural language processing or similar non-deterministic tasks	Agents	- Consider large and potentially unstructured documents in the workflow - Ambiguous tasks (e.g., diagnosing a support ticket, researching a market) - Highly variable inputs/paths - Situations where learning from each run adds value - Possible that one or multiple agents to be executed as steps in chorus with first-party UiPath functionality including but not limited to best-in-class UI automation, document understanding, etc.	- Mapping and visualizing a full end-to-end business process - Startup time and runtime - Workflows that require deterministic outcomes - Tasks which are repetitive and rules-based

04

**What about the rest of the platform?
How do the products play into agentic
automation?**

Platform architecture overview

UiPath Automation Cloud

Cloud Portal provides instant signup, unified access and centralized group and license management for enterprise and community customers.

All services are available in the cloud* as a **multi-tenant SaaS** solution managed centrally by UiPath.

All services are configured for **disaster recovery** and **high availability** in multiple regions to provide customers with 99.9% availability across the globe.

Customers can configure direct directory **connection** with their corporate **Microsoft Entra ID** or **SAML providers for authentication** to leverage their enterprise IT policies.

Customers can securely **connect robots** from on-premises and/or public cloud environments managed by their IT or managed by the Automation Cloud.

* Not all services are available in all regions

** Not all available services are shown – services here are representative

UiPath Automation Suite

Automation Suite enables you to deploy the **full UiPath automation platform*** in the environment of your choice, including bare metal machines, on-premises Virtual Machine infrastructure, or cloud subscriptions to any of the major providers.

Kubernetes-based infrastructure, cluster management, and monitoring tools, all preconfigured, **dedicated to and optimized for UiPath, all supported by UiPath**. This enables running all the products at scale and with HA.

All shared suite capabilities that enable you to easily configure the integration with existing enterprise systems, such as AD, AAD, or SAML, across all products; a common experience is offered across the suite for the user, tenant, external applications, and license management.

** Not all available services are shown – services here are representative.

Comparing deployment scenarios

Self-hosted

UiPath® Automation Suite

Flexible self hosted install (including air-gapped) on your existing Kubernetes infrastructure (AKS/EKS/OpenShift) or Linux VMs/Bare Metal

Optimized for customers needing to self-host:

- ✓ Most flexible option for deploying UiPath platform with stringent compliance and regulatory requirements
- ✓ Air-gapped scenarios
- ✓ In-house IT teams experienced with efficient Kubernetes and Linux operations at scale

SaaS

UiPath® Automation Cloud™

Start instantly, scale infinitely and get the most UiPath capability with the multi-tenant SaaS solution recommended for most customers

Recommended for most customers:

- ✓ Maximum UiPath Business Automation Platform capability
- ✓ Latest capabilities first and exclusive AI Services
- ✓ Enterprise security and compliance capabilities and attestations
- ✓ Fastest time to value
- ✓ Low TCO with high ROI
- ✓ Low IT infrastructure and management requirements
- ✓ Businesses of all sizes

Dedicated SaaS

UiPath® Automation Cloud™ DEDICATED

Dedicated deployment within Automation Cloud, delivering UiPath capabilities with data and compute isolation

Recommended for large customers needing:

- ✓ Data and compute isolation with SaaS experience
- ✓ Advanced network connectivity options, enhanced data encryption and upgrade flexibility

One platform with flexible delivery options

Business Automation capabilities offered

UiPath® Automation Cloud™

The most comprehensive UiPath capability, delivered as multi-tenant SaaS. Recommended for most customers. 2 updates/month.

UiPath® Automation Cloud™ DEDICATED

A SaaS option available to large customers who require a dedicated environment. 2 updates/month.

UiPath® Automation Suite

Designed for large customers with deep IT resources who wish to selfhost for total control. Annual feature updates.

Anticipated operating costs and complexity

Customization and advanced control

High-Level deployment method comparison

	Automation Cloud	Automation Suite	On-Prem Standalone
Deployment Options	Products pre-deployed to the Cloud with full governance	Single install file for the entire Suite with On-Prem, Public or Private cloud deployment options	Individual install files are available per product. Can be installed on the client's cloud or data centers
Upgrade	Consistent rolling upgrades	Single upgrade for entire suite	Upgrades provided on a per-product basis
Updates and Releases	Major and minor updates are provided every two weeks	Major updates provided twice yearly as one install for the entire Suite	Major updates are provided twice a year for every individual product and installed as needed
Hardware Footprint	Fully Cloud-based	Single set of hardware requirements to cover full UiPath suite (with specific exceptions)	Hardware and software requirements vary by product and configuration
Maintenance	Cloud Environment fully maintained by UiPath	Clients responsible for reduced onsite maintenance vs. MSI On-Prem due to simplified updates + installation	Clients responsible for onsite maintenance, with UiPath Guidance
Security	Public and Private, Standard and Air Gapped Options	Fully containerized secure environment	Configured based on deployed products
Deployment Considerations	Products are pre-deployed in UiPath's Cloud environment	Ideally suited for more comprehensive suite deployments	Manual install and maintenance requirements
Reliability	Fully managed Cloud Environment with 99.9% Uptime Guarantee and built-in DR	Only HA, multi-node supported for prod deployments. Single-node option supported for test/QA/dev	Redundancy recommended, with single and multi-node deployment options
Cost Benefits	Overall lower on-site IT and maintenance costs	Lower maintenance and management costs compared to MSI On-Prem – especially when deploying multiple products	Most flexibility in terms of per-product pricing

For Cloud vs On-Prem vs Automation Suite product availability, [click here](#).

- 1 User creates and publishes Business process in Studio Web
- 2 Agentic Orchestration process is deployed/started in OR
- 3 When a AO job is started, a Message Bus event is sent to PIMS to execute the job
- 4 PIMS schedules the Job in Temporal and Temporal executes the workflow through PO Workers
- 5 PO Worker executes UiPath systems based on the BPMN Task
- 6 PO writes analytics data to Insights and Trace to LLM OPS
- 7 PIM Frontend calls PIMS API for Live instance monitoring and analytics dashboards

UiPath Agents

1 User configures their agent in UiPath Agents

2 Upon initialization trigger, agent will start its loop

3 Agent will create a plan based on its design

4 Agent will execute various tool calls using UiPath tools, and vectorized knowledge

5 Agent will observe on its interactions, reflect, and update its state through the course of its loop

6 Agent will exit loop upon observation and reflection of all successful tool calls to execute its plan

Please Note:

Subject to Change

Representative of *one* agentic loop and agentic loop types supported by UiPath

UiPath Agent Builder: Service Architecture

UiPath Agent Builder: Runtime Execution Flow

Autopilot for Everyone (A4E) data flow

- 1 In the chat interface, a user enters a prompt or uploads an image/document, etc. related to a request.
- 2 Autopilot checks if the process can be actioned or the question can be answered using:
 - An automation available to the user
 - Information stored in Context Grounding***
- 3 If the request **cannot** be fulfilled, Autopilot will initiate a chat loop to better understand or clarify the user's intent, gather additional information, and refine the request.
- 4 If the request **can** be fulfilled, Autopilot will return:
 - Any relevant answers (with cited sources from Context Grounding, if applicable)
 - Any relevant automations available to the user (automation parameters will be inferred)
- 5 The user validates the answer(s) or automation(s) returned. If the answer(s) or automations returned are not correct, they can further refine their prompt. The user can opt to kick off an automation returned. The results of the automation will be displayed back to the user in Autopilot.

Note: A4E recommends automations but also infers parameters.
- 6 The chat history and results are stored in a system bucket.

* This is not an exhaustive illustration of UiPath products you can create automations with
 ** This is not an exhaustive list of third-party integrations

AI Trust Layer

Trust Boundary

Context Grounding data flow

Action Center

Components are part of **Studio, Robot and Orchestrator**.

User interface accessible through **mobile app** and **Action Center portal**.

Human Task injection powered by **Long running workflow** framework in Orchestrator that enables optimal resource utilization.

Ability to introduce **newer task types** with its own visualization.

APIs for External systems to sync Tasks created by UiPath Robots.

UiPath Studio

Development canvas

- Process designer
- Orchestrator Publish
- Package Manager

Services Layer

- Robot API
- NuGet
- TFS/SVN/GIT

Governance

- Via Remote policies
- Via Orchestrator assets policies
- Via Automation Ops

UiPath Studio Web

Development

- Process designer
- Debug
- Watches
- Templates
- Automations
- Runs
- Connections
- Share
- Import
- Open in Desktop
- Permissions

Services Layer

- Backstage Management
- Typecache

Governance

- Via Automation Ops

Apps and App Studio

App Studio is the application designer to manage lifecycle of an app.

App Runtime is the Progressive Web App (PWA) end-user experience that runs apps.

Apps can be made public or be shared with varied **permissions** with different users including runners, contributor and co-owner.

Two-way bind data to/from attended and unattended processes.

Able to work in multiple **hybrid modes** with on premise/public cloud hosted UiPath Automation Suite or standalone Orchestrator.

Multi-Tenant Containerized backend infrastructure running in Azure Kubernetes Services for compute and MongoDB Atlas for storage with built-in cross region High Availability and Disaster Recovery.

*In Automation Suite 23.4+ Apps uses SQL instead of MongoDB for ease of management and Multi-Site Disaster Recovery.

IXP: Document Understanding: OOB Specialized Models

Available deployment models

- Cloud
- On-prem connected
- On-prem airgapped

Components

- RPA workflow running from Robot in Customer's environment
- Document Understanding framework
- Outbound calls to UiPath for digitization (UiPath OCR) and extraction (ML Extractor)

Flow

- At run-time, Robot reads document, with a call to OCR during digitization phase if needed
- A prediction is made against the appropriate OOB specialized model endpoint for the model in question (e.g., invoices, receipts, utility bills, etc.)
- Customer configures confidence threshold for human validation or outputs extraction results for the Robot to continue automation

IXP: Document Understanding (Classic): Cloud

Available deployment models

- Cloud

Components

- RPA workflow running from Robot in Customer's environment
- Document Understanding framework
- AI Center running in Automation Cloud

Flow

- At design-time, a model is trained and deployed as a ML Skill in AI Center
- At run-time, Robot reads document, with a call to OCR (OOB Specialized Model) during digitization phase if needed
- A prediction is made against the deployed ML Skill in the customer's Automation Cloud Tenant
- Customer configures confidence threshold for human validation or outputs extraction results for the Robot to continue automation

IXP: Document Understanding + AIC: On-prem connected, or air-gapped

Available deployment models

- Cloud
- On-prem connected
- On-prem air-gapped

Components

- RPA workflow running from Robot in Customer's environment
- AI Center (Automation Suite)

Flow

- At design-time, a model is trained and deployed as a ML Skill in AI Center
- If AI Center is running in a separate Orchestrator from the Robot, ML Skills can be exposed as ML endpoints
- At run-time, Robot reads document, with a call to OCR from on-prem AI Center during digitization phase if needed
- A prediction is made against the deployed ML Skill in the customer's on-prem AI Center instance
- Customer configures confidence threshold for human validation or outputs extraction results for the Robot to continue automation

IXP: Modern Projects – Document Understanding

Design-Time Data Flow

IXP: Document Understanding (Modern)

Run-time data flow

- 1** The ML Extractor activity will point to an ML model in either a Modern DU Project or an OOTB ML model
- 2** Modern Project ML models are fine-tuned models based on DocPath
- 3** UiPath OOTB Specialized Models allow customers to process documents from specific document types DocPath has been trained on
- 4** The Generative Extractor, DU project extractor, and extract document data activities will point to a third party LLM in UiPath's AI Trust Layer (today deployed in a private instance of Azure OpenAI)

UiPath IXP: Communications Mining

IXP: Generative Extraction (GenEx) for Docs

Design-time data flow

IXP: Generative Extraction (GenEx) for Docs

Run-time data flow

- 1** The GenEx Extractor activity will point to the respective model in IXP
- 2** GenEx project models are based off a model optimized for unstructured document types
- 3** The GenEx Extractor activity will point to a third party LLM in UiPath's AI Trust Layer (today deployed in a private instance of Azure OpenAI)

Integration Service

Integration Service

- Centralized integrations
- Adopted by UiPath portfolio
- Available in Automation Cloud

Core components

- Catalog
- Connections
- Triggers

Connectors

- Self-describing metadata
- Standardized RESTful interface
- Standardized authentication
- Enriched capabilities
- Integration Activity Pack

UiPath Insights

UiPath Insights pulls and aggregates data from **Orchestrator, Automation Hub, Action Center, Licensing, and Document Understanding** databases to power analytical reporting and monitoring.

Data extracted includes:

- Orchestrator robot logs, queues, and jobs
- Automation Hub components and ideas
- Document Understanding projects and activities
- User licenses, robot licenses, and AI units
- Action Center actions

Customers have the option to enable a **real time data export** pipeline to either AWS SQS or Azure Event Hub.

The power of **Insights** comes from the underlying technology powered by Google Cloud, which allows advanced data model creation and live querying of the Snowflake database.

Insights is available in **Automation Cloud, Automation Suite, and Standalone**

High Availability and Failover

High availability and disaster recovery

- Deploy platform in correct configuration
- Ensure redundancy in datacenter for Orchestrator, HAA, Elasticsearch and SQL Server

Web Server Layer

- Deploy a DR datacenter with Orchestrator, replicated Elasticsearch and Secondary SQL Server Database

Multi-tenancy

- Supported by Orchestrator

Automation Ops

Automation Ops is a service in **available both in cloud and on premise**, via Automation Cloud and Automation Suite.

Automation Ops uses **microservices** for the backed. One service for each functional vertical.

The front end is served as **static code** from an Azure CDN.

Both front end and backend communicate with the Platform services.

Automation Ops is an **organization level** service.

Robot & Assistant

User Interface Layer

- UiPath Assistant

Services Layer

- Executor service
- Orchestrator connection for heartbeat and logs
- The robot can run on user's local desktop, public cloud or automation cloud

Automation Cloud Robots

UiPath Automation Cloud Robots

provide UiPath Robots as a service built directly into Orchestrator.

Two types to choose from depending on the needs of the automations

- Windows Virtual Machines (VMs)
- Instant (Serverless)

Windows Virtual Machines create Windows Service Virtual machines hosted by Microsoft Azure and automatically install the latest Enterprise UiPath Robot version.

Instant Robots are fully serverless Linux container-based robots.

These start jobs inside a UiPath Robot Linux Docker container hosted in AWS Lambda.

Test Manager

Test Suite

helps test any technology and proactively resolve issues.

Components

includes Test Manager App, Test Manager Hub, Studio, Orchestrator Testing Module and Test Robots.

Open Architecture

Integration with 3rd party ALM tools, CI/CD, Open Source, source control, open APIs, etc.

Built on proven production-grade technology (SOC 2, compliance and governance capabilities, role-based access management, asset and data management).

AI Center

AI Center

- Highly available, highly scalable MLOps system
- Multi-tenant environment
- Available on cloud or on the customers premises/public cloud*
- Permissions managed at project level

AI Center has five core services

- Provisioning Service
- Model Management
- Data Management
- Deployer
- Helper

And two types of dynamic services

- ML Skills
- Training Pipelines

Automation Hub

Automation Hub is a service in Automation Cloud and is using the existing tenant service from the cloud level in order to enable **multi tenancy**.

Via the integration with Automation Cloud, Automation Hub can communicate also with the Cloud Orchestrator as well as leverage the **Azure Active Directory integration**.

The integration layer contains also connections to on prem products: Task Capture, Process Mining, Assistant and Studio.

Available Regions		
EU	US	AU
CA	JP	SEA
CEI	UK	GxP

Process Mining – Automation Cloud

Users access **Process Mining Portal** via the browser from Automation Cloud to visualize processes or discover new processes.

Task Mining Client captures user activity on their desktop and pushes the data using the Task Mining Pipeline, and it is subsequently combined with source system data from Process Mining.

Backend, Data Pipeline & PMT are responsible for transforming raw data to discover processes, identifying automation ideas, and monitoring process changes. They also manage data transport between blob storage and the data warehouse.

AI & Simulation engine is responsible for supporting Autopilot, AI & scenario simulation capabilities.

Integrated Extractor or Extraction tools are used to upload data files or to extract data from source systems and upload it to a dedicated blob storage.

Platform Services are a set of central services in the UiPath Automation Cloud that provide functionality like identity, licensing, process tracking service and tenant management.

Process Mining – Automation Suite

Users access **Process Mining Portal** via the browser from Automation Cloud to visualize processes or discover new processes.

Backend, Data Pipeline & PMT are responsible for transforming raw data to discover processes, identifying automation ideas, and monitoring process changes. They also manage data transport between blob storage and the data warehouse.

AI & Simulation engine is responsible for supporting Autopilot, AI & scenario simulation capabilities.

Users can upload data files directly in portal or use **Extraction tools** to extract data from source systems and upload it to the data warehouse.

Platform Services are a set of central services in the UiPath Automation Cloud that provide functionality like identity, licensing, process tracking service and tenant management.

Task Mining

Task Mining

- Collects screenshots along with metadata (user action type, location, url/exe name)
- Runs a machine learning model to analyze the data and suggest a list of processes with high automation potential

Components include:

- Desktop client application
- Web UX – admin + visualizer
- ML analyzer model

Task Capture

Task Capture

- Desktop application to document a process/task
- Recorder allows capturing a process or drawing a diagram and its linkage to the relevant business policy

The Task Capture tool

- Documents the UI element (DOM) path
- Captures screenshots to export to Studio, StudioX and Microsoft Word
- Cross team collaboration and change management is supported through Automation Hub
- Documentation of manual test cases for Test Manager
